[task back and operator back]
ZIRCON

ZM2

The Zircon is a stylish heavy duty executive seating option. Designed for multi functional applications, numerous adjustments can be made to offer optimum comfort in a variety of positions.

Continual support to the user can be made available with the Zircon chair, seat and back being adjusted individually or synchronously together to achieve the ideal fit.

The Zircon also has a seat slide function to achieve correct seat depth, adjustment being provided through an under seat bar, to pull forward or backward as desired.

ZH1

[Adjustable headrest and neck support]

[Multi function mechanism with seat slide]

Z04

To encourage a healthier posture, the Zircon has an anatomically contoured seat and moulded back to fit the user's body. The seat cushions are designed to help keep the pelvis straight, thus encouraging the spine to assume its natural double S shape.

The silver base is fitted as standard allowing the Zircon to be positioned as a heavy duty chair which will complement any executive setting.

The chair is able to fulfil health and safety requirements in being tested to British Standard certification BS 5459: Part 2: 2000 for 24 hour use by persons weighing up to 150kg.

DIMENSIONS AND SPECIFICATIONS

[specifications]

Independent back rake

The back of the chair can either be set in free floating mode or locked in one of multiple positions.

Gas lift

The lever on the front right hand side of the chair controls the gas lift. Lift the lever and the chair will rise or if sitting the chair will lower.

Asynchron seat and back

The mechanism fitted to the Zircon includes a 1:1 synchronised reclining seat and back action. The seat and back move in unison to achieve a good posture and sitting position.

The seat and back can be set to follow the users movements in free float mode or locked in multiple positions.

Height and width adjustable arm rests

The arms can be extended outwards away from the seat via the small hand wheel under the seat.

Height is adjusted via a ratchet mechanism. 5 different heights are achieved by lifting the arm a single ratchet at a time. Once you reach the top, the arm will reset to its lowest position.

Seat slide

Located underneath the seat at the front of the chair, the bar is pulled upwards to slide the seat forward or backwards, into the desired position and then released.

Head rest (ZH1)

Adjustable head and neck support helps to relieve tension by supporting the head or neck from below. The double hinged headrest is also height adjustable to suit the user.

Back height adjustment

The back height is adjusted from the sitting position by gently lifting the back, which works on a ratchet mechanism. The back has 5 increases in height, each click of the ratchet representing a 5mm adjustment. Once you have reached the top height the back will reset to its lowest position.

A wide range of fabric upholstery options are available.
